KOTAANA

Complete app flow & backend guide

Every feature, screen by screen — what you do, what Kotaana does next, and what is saved. Followed by the full API list, the database schema and the business rules.

Athlete app · Gym / Coach portal · Admin

Built from the live application · 48 screens · 49 API routes · 33 database tables

Generated 9 October 2026 · Local test environment

START HERE

How to read this guide

Each flow is a row of steps. Read left to right: the arrow means “this leads to that”. The dark box underneath says what happens next.

Each step shows

YOU DO	The action a person takes on that screen.
KOTAANA	What the app does in response — the rules and logic.
SAVED	The database table(s) written or read.

Screens are real captures of the running app (athlete = phone view, gym and admin = desktop view), shown in the order they appear in use.

Who is who

Athlete · Gym / Coach · Admin

Coach and gym are one portal: a coach's own gym is their workspace.

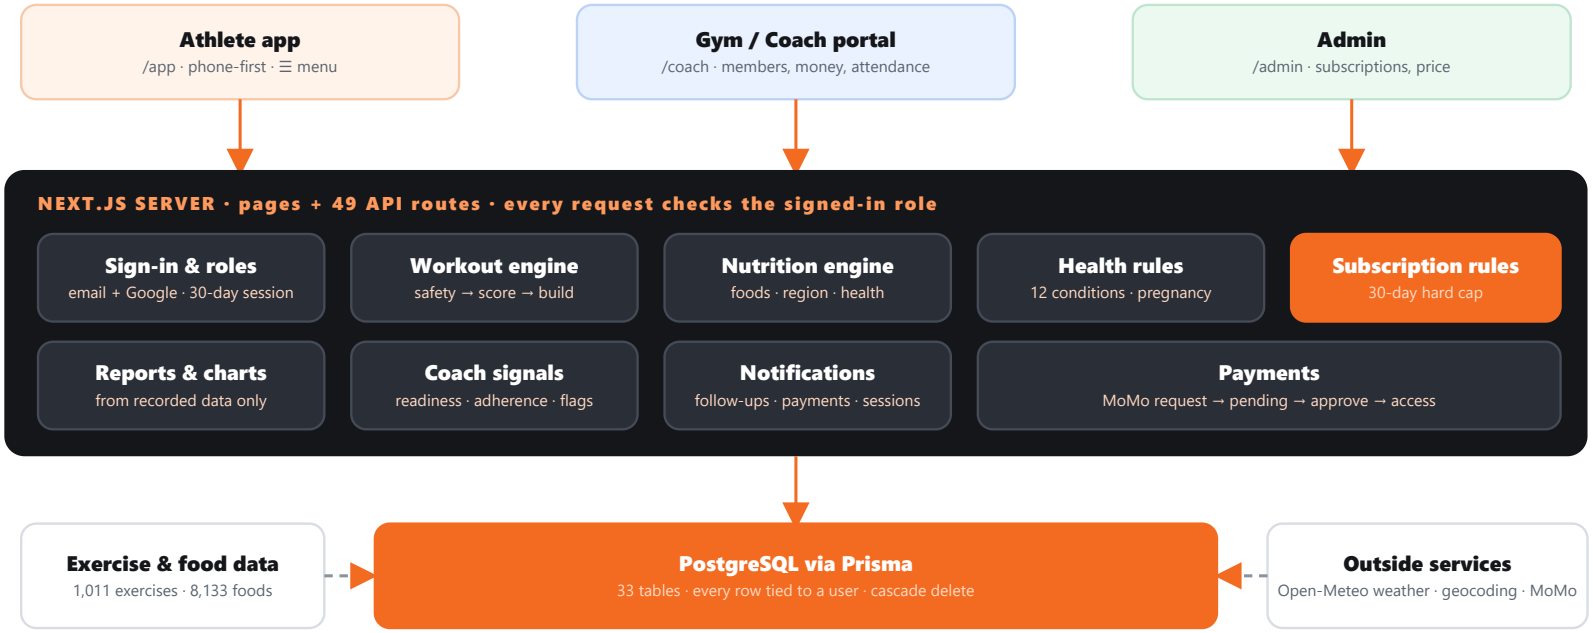

Contents

A	System at a glance, daily loop, who can do what
01	Create an account and log in
02	Daily check-in
03	Today's workout — built automatically
04	Nutrition and hydration
05	Health profile personalises everything
06	Progress and reports
07	Track Me and location
08	Join a gym, pay, get approved, get access
09	Gym coaching loop
10	Attendance, memberships and revenue
11	Set up your gym
12	Recommendations, sessions and analytics
13	Admin: price, access and payments
14	Menu, back button and settings
B	Backend: API routes, database schema, relationships, business rules, notifications, setup

PART A · OVERVIEW

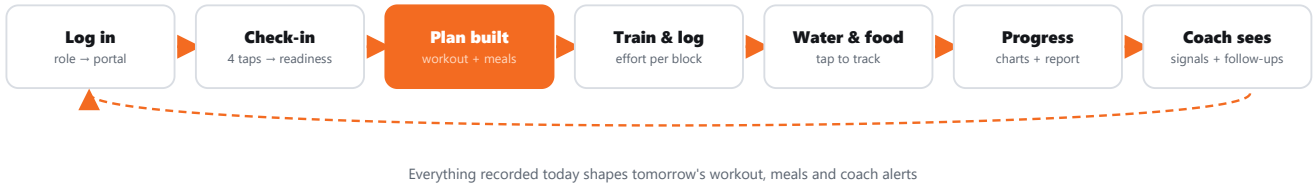

The system at a glance

Three portals, one server, one database. Every request is checked against the signed-in role, and every row belongs to a user.

Solid arrows: user requests. Dashed: data read in / services called. AI ranking is optional and can never add an exercise the rules did not approve.

The daily loop

Everything recorded today shapes tomorrow's workout, meals and coach alerts

PART A · ACCESS

Who can do what

Permissions are enforced on the server for every action, not just hidden in the interface.

ACTION	ATHLETE	GYM / COACH	ADMIN
See and edit own profile, health, plans, water, progress	✓	own gym members only (read)	—
Daily check-in, workout, nutrition, hydration, Track Me	✓	—	—
Join a gym, pay it, see own subscription	✓	—	—
See a member's progress, readiness, conditions, injuries	—	✓ roster only	—
Medications and surgeries	✓ own	✗ never shown	✗
Follow-ups, shared notes, injury log, sessions	receives	✓ creates	—
Attendance, memberships, revenue, equipment	—	✓ own gym	—
Approve a member's payment	—	✓ payments to this gym	✓ any
Grant access without a request	—	✓ own members, 30 days	✓ anyone, 1–30 days
Set price and exchange rate	—	—	✓
Revoke access	—	only access it granted	✓ any

Hard 30-day cap. Every grant or renewal is limited to 30 days by one function. Asking for 90 days is refused.

Server sets the price. The amount a member pays is never taken from the browser: USD price × admin rate.

Admin is never public. Only the configured admin email can become admin; sign-up cannot create one.

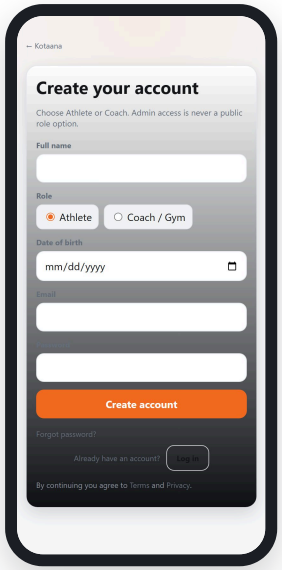

FLOW 01

Create an account and log in

One login page for everyone. The account's role decides which portal opens.

Athlete | Gym / Coach | Admin

1 Sign up

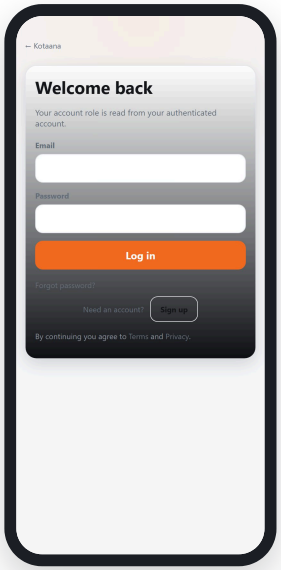

YOU DO Enter name, date of birth, email, password; pick Athlete or Coach / Gym.

KOTAANA Checks the email is new, hashes the password, works out age and age band. Admin can never be chosen here.

SAVED users, profiles (age, ageBand, connectCode)

2 Log in

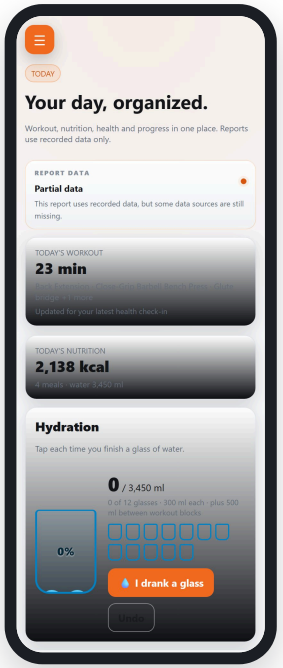

YOU DO Email + password (or Google, when configured).

KOTAANA Verifies the password and starts a 30-day signed session. Role sends you to /app, /coach or /admin.

SAVED session cookie (JWT); no password is ever stored in plain text

3 Land on the Dashboard

YOU DO New athletes first accept Terms, Privacy and the health notice, and set age, goal and level.

KOTAANA Opens today's plan right away. Gym and admin accounts open their own portals instead.

SAVED profiles.onboardingCompleted + consent timestamps

WHAT HAPPENS NEXT

- Athlete: the daily check-in pop-up appears (Flow 02).
- Gym: the dashboard shows requests, members and alerts (Flow 09).
- Wrong password: a clear error — nothing is revealed about whether the email exists.

GOOD TO KNOW

- Google sign-in links to an existing account with the same email.
- New Google users go through the setup form first.
- Every page has ☰ (menu) and ← (back); the menu closes when you tap a link.

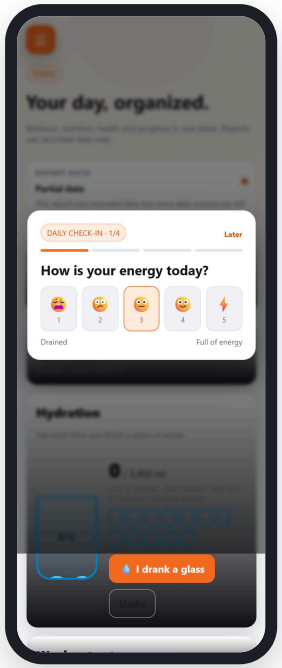

FLOW 02

Daily check-in

Four taps, no typing. The answers become today's readiness score and steer the workout.

Athlete

1 Energy

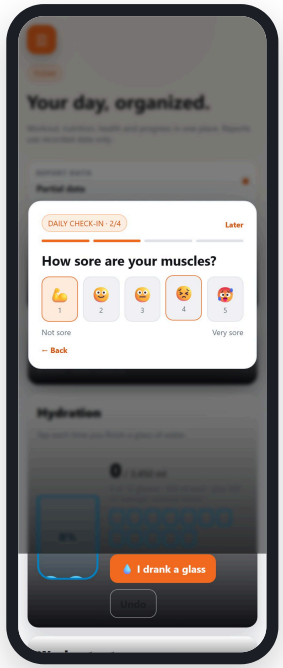

YOU DO Tap a face from 1 (drained) to 5 (full of energy).

KOTAANA Appears once a day on the first visit until answered. "Later" hides it for this visit only.

SAVED —

2 Soreness, then mood

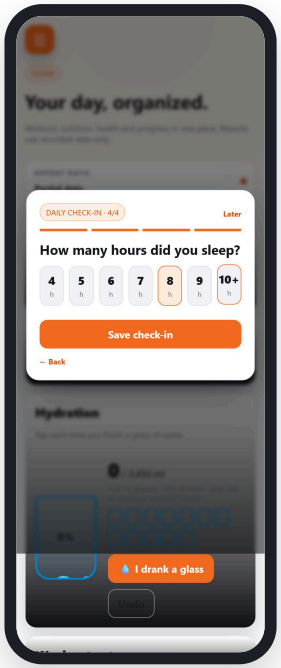

YOU DO Tap one face for each question; the next question slides in.

KOTAANA A progress bar shows 4 steps. Back lets you change an answer.

SAVED kept in the pop-up until you save

3 Sleep

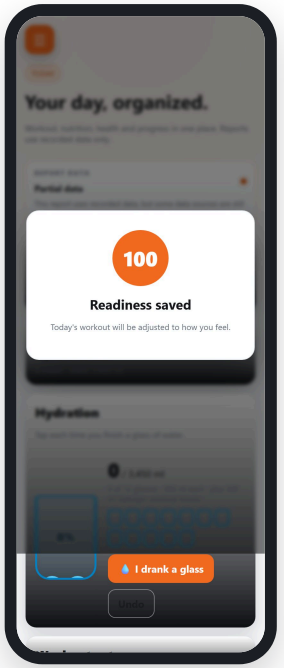

YOU DO Pick hours slept (4 to 10+) and tap Save check-in.

KOTAANA Score = 50 + energy×8 + mood×5 − soreness×9 + sleep×2 (capped at 12 h), limited to 0–100.

SAVED daily_checkins (one row per user per day)

4 Readiness score

YOU DO Read your score — the window closes by itself.

KOTAANA The next time today's plan is loaded it is rebuilt, because the check-in is newer than the plan.

SAVED workout_plans (new version)

WHAT HAPPENS NEXT

- Readiness below 45: mobility and low-impact moves are favoured.
- Below 35: fewer sets and easy effort.
- High stress (4–5) on the Health page lowers the score by 10 points.

WHO ELSE SEES IT

- Your gym sees your 7-day average and last check-in.
- Progress charts plot the score day by day.
- A "sick" or "off" feeling raises a flag on the gym's Recommendations page.

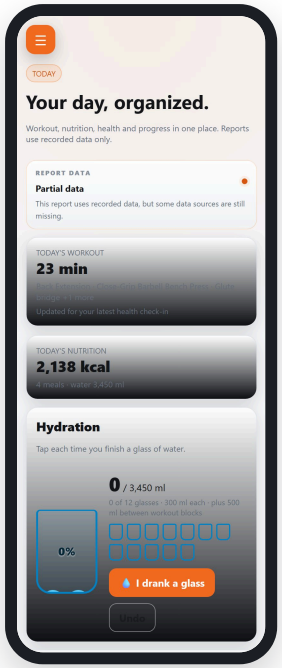

FLOW 03

Today's workout — built automatically

The first time you open the app each day, a safe workout is created. No button needed.

Athlete

1 Dashboard "Today" card

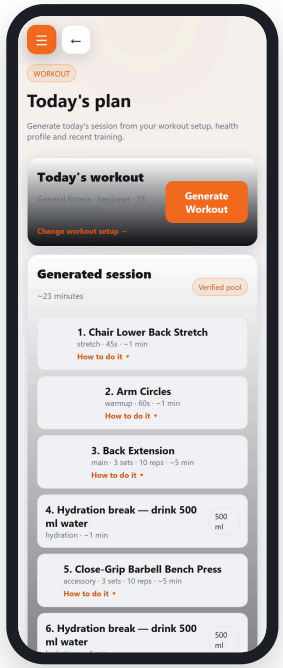

YOU DO Open the app.

KOTAANA Looks for today's plan; if none, builds one. Also builds today's meals. Shows minutes, key moves and calories.

SAVED workout_plans (planData JSON, version)

2 The plan

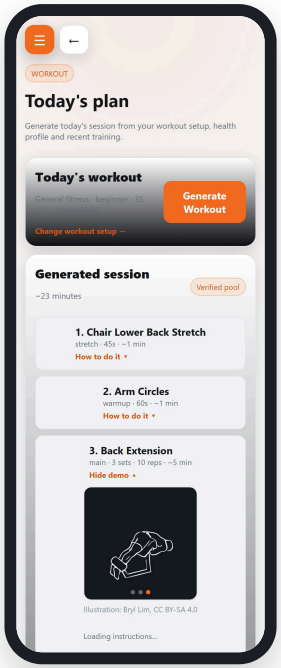

YOU DO Read the order: stretch, warm-up, main work, 500 ml water breaks, core, cool-down.

KOTAANA Only verified exercises that fit your equipment (plus your gym's), age, level, injuries and health conditions are considered, then scored.

SAVED —

3 How to do it

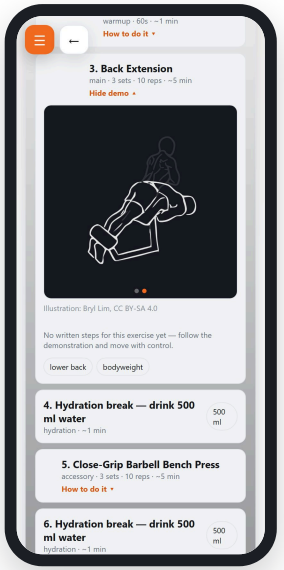

YOU DO Tap "How to do it" on any move.

KOTAANA Shows an animated start/end demonstration and numbered steps. Drawn exercises show the 3-frame animation with the artist credit.

SAVED reads exercises (images, steps)

4 Train and record

YOU DO Tap Start Workout, then easy / ok / hard (or skip) after each block.

KOTAANA Each answer is stored. Tomorrow: easy → +2 reps; hard or skipped → fewer sets and reps.

SAVED exercise_performances, workout_logs

WHEN THE PLAN IS REBUILT

- A check-in or injury is saved after the plan was made.
- You press Generate Workout.
- A new day starts.

SAFETY ORDER (CANNOT BE SKIPPED)

- Database → safety filters → progression → optional AI ranking → final check.
- If nothing safe exists the app says so — it never invents an exercise.
- Gym equipment is added for members of that gym.

FLOW 04

Nutrition and hydration

Meals and a water target that follow your health, diet, region and weather — with a one-tap water tracker.

Athlete

1 Today's fuel

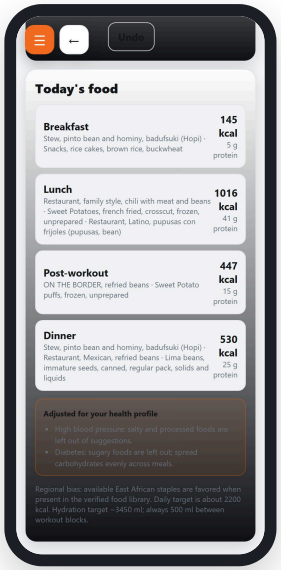

YOU DO Open Nutrition. Tap "I drank a glass" each time you finish 300 ml.

KOTAANA Builds 4 meals from verified USDA foods, scaled to your calorie target; water target adjusts for heat and region. The glass fills with an animation.

SAVED hydration_logs (glasses per day)

2 Adjusted for your health

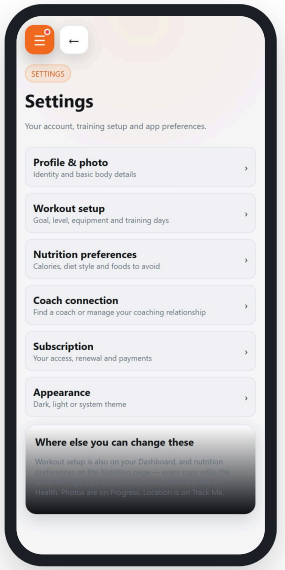

YOU DO Nothing extra — your Health profile is applied automatically.

KOTAANA Diabetes removes sugary foods; high blood pressure, heart and kidney conditions remove salty and processed foods; pregnancy removes raw fish and liver.

SAVED reads profiles.healthConditions

3 Preferences

YOU DO Settings → Nutrition preferences: calories, diet style, allergies.

KOTAANA Allergy and diet filters are hard rules. The same form is also on the Nutrition page.

SAVED profiles (dietaryStyle, allergies, targetCalories)

WHAT HAPPENS NEXT

- Water logged appears in the Progress water chart and the gym's athlete page.
- Location saved → weather-based water target and regional foods (East African staples).
- Tomorrow's meals rotate automatically.

NOT YET BUILT

- Calorie target does not yet use age and weight automatically (you set it).
- Food logging by photo and daily meal-vs-plan totals are planned.

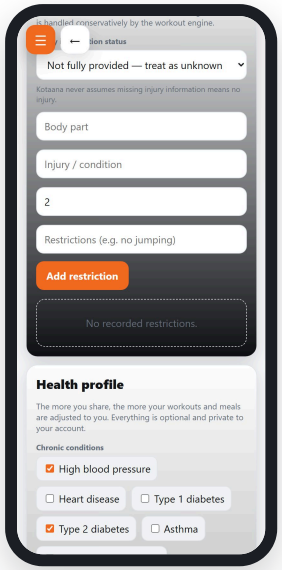

FLOW 05

Health profile personalises everything

Tick the conditions you live with and add the details your coach should know. Plans change at once.

Athlete | Gym / Coach

1 Fill in your health profile

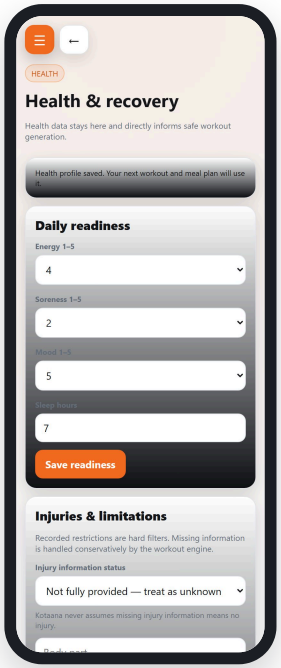

YOU DO Tick chronic conditions; add medications, surgeries, pain areas, stress, smoking, alcohol, pregnancy.

KOTAANA 12 conditions each carry rules: exercises to avoid, an effort ceiling, a safety note and food limits.

SAVED profiles.healthConditions, medications, stressLevel, isPregnant…

2 Save

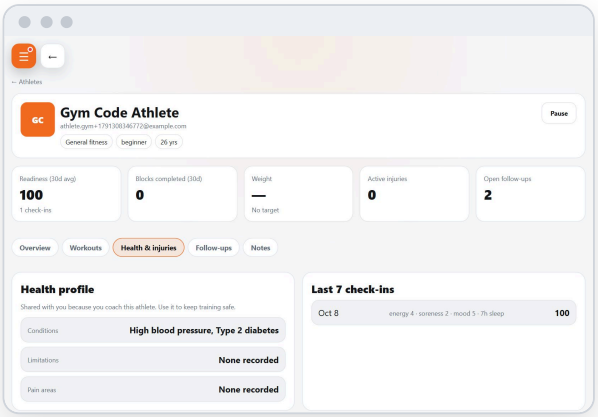

YOU DO Tap Save health profile.

KOTAANA Confirms it was saved and scrolls to the top. The next plan load uses the new profile.

SAVED profiles

3 What the gym sees

YOU DO Gym opens the athlete → Health & injuries.

KOTAANA Coaches see conditions, limitations, pain areas, pregnancy and injuries; medications and surgeries stay private.

SAVED reads profiles, injuries, daily_checkins

EXAMPLES OF THE RULES

- Arthritis / obesity: no jumping or sprinting.
- Osteoporosis: also no sit-ups or twisting.
- High blood pressure, heart disease, kidney, sickle cell, pregnancy: effort never above “moderate”.

SAFETY STANCE

- Kotaana does not diagnose or prescribe.
- Missing injury information is treated as unknown, which means extra caution.
- A coach-logged injury makes injury data “known” for the workout engine.

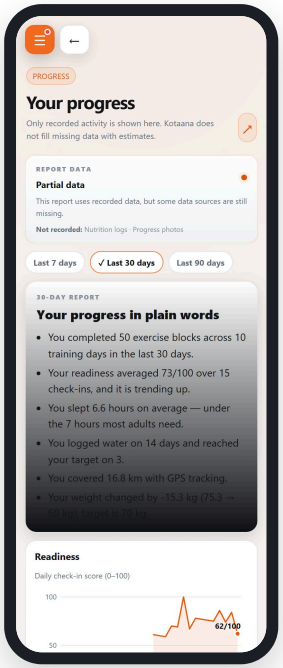

FLOW 06

Progress and reports

Everything recorded becomes charts and a plain-language report. Nothing is estimated.

Athlete | Gym / Coach

1 Overview and report

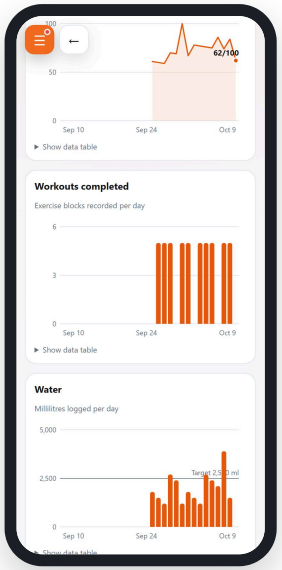

YOU DO Open Progress; choose 7, 30 or 90 days.

KOTAANA Writes sentences from recorded data: workouts done, average readiness and trend, sleep, water days, distance, weight change.

SAVED reads check-ins, performances, water, runs, weight

2 Five charts

YOU DO Hover or tap a bar or point for its exact value.

KOTAANA Readiness, workouts completed, water (with target line), weight (with target line) and distance. Each has a data table.

SAVED —

WHERE THE DATA COMES FROM

- Readiness: daily check-in.
- Workouts: the easy / ok / hard taps.
- Water: the glass tracker.
- Weight: saving your weight in Profile.
- Distance: Track Me runs.

ALSO VISIBLE TO YOUR GYM

- The same 30-day charts appear on the gym's athlete page.
- Team charts on the gym dashboard average all active members.

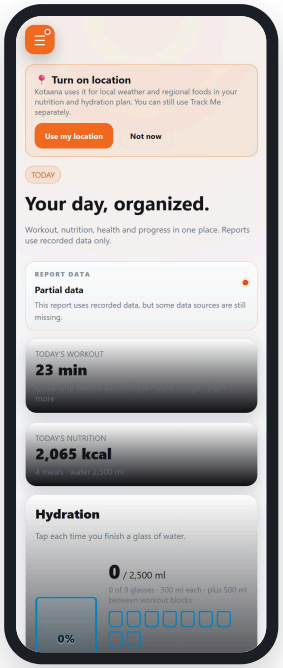

FLOW 07

Track Me and location

GPS tracking for runs, walks and rides — and one-tap location for weather-aware plans.

Athlete

1 Turn on location (anywhere)

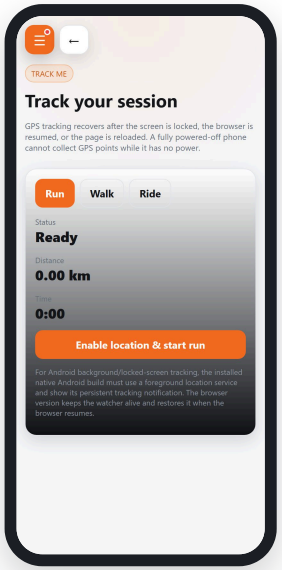

YOU DO Tap “Use my location” in the banner, or in Nutrition preferences.

KOTAANA Browser permission is asked once. Coordinates are saved and the city/country is looked up (bigdatacloud.net) — no trip to Track Me.

SAVED profiles.locationLat/Lng/City/Country

2 Track a session

YOU DO Pick Run, Walk or Ride and tap start.

KOTAANA Records route points, filters impossible jumps, survives a locked screen or reload by storing a draft on the device.

SAVED run_activities (route JSON, distance, time)

WHAT HAPPENS NEXT

- Saved runs appear in Progress → Distance.
- Location feeds the weather-based water target and regional foods.
- Tracking permission is separate and only asked when you start a session.

LIMITS

- A phone with no power cannot record.
- Browser tracking depends on the phone keeping the page alive.

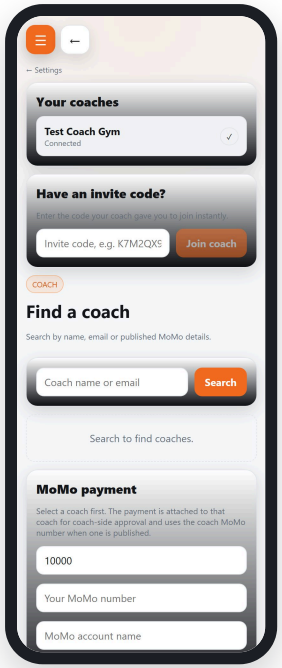

FLOW 08 · PART 1 OF 2

Join a gym, pay, get approved, get access

The money flow end to end: a member pays, the gym sees it as PENDING, confirms it, and 30 days of access start.

Athlete · Gym / Coach

1 Find your gym

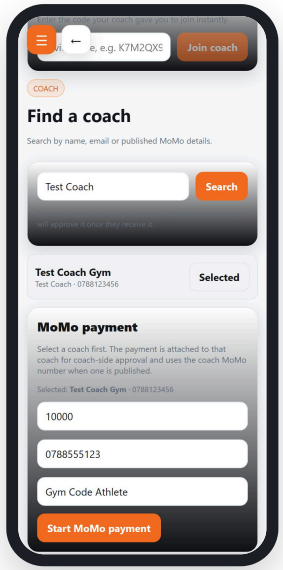

YOU DO Settings → Coach connection. Search by name, or enter an invite / gym code.

KOTAANA A gym code or invite connects you instantly; a search request waits for the gym to accept.

SAVED coach_athlete_relations (active / pending)

2 Send the payment

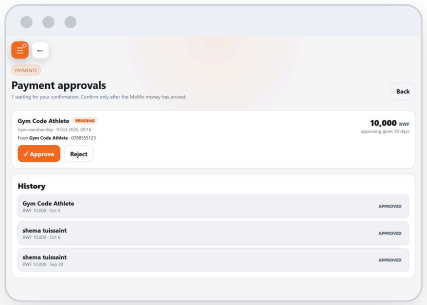

YOU DO Pay the gym by MoMo, enter your number and name, tap Start MoMo payment.

KOTAANA Records a PENDING payment attached to that gym. If live MoMo is not configured, nothing moves automatically — the gym confirms manually.

SAVED payment_requests (status = pending)

3 Gym sees it as PENDING

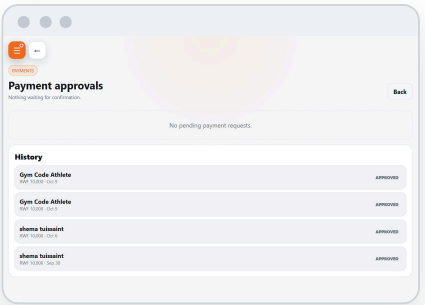

YOU DO Open Payment approvals.

KOTAANA A card shows who paid, the plan, time, MoMo number, amount and "approving gives 30 days".

SAVED reads payment_requests

4 Gym approves

YOU DO Press ✓ Approve once the money has arrived.

KOTAANA Marks the payment approved, grants 30 days, and tells the member. History keeps the record.

SAVED payment_requests.approved · subscriptions · notifications

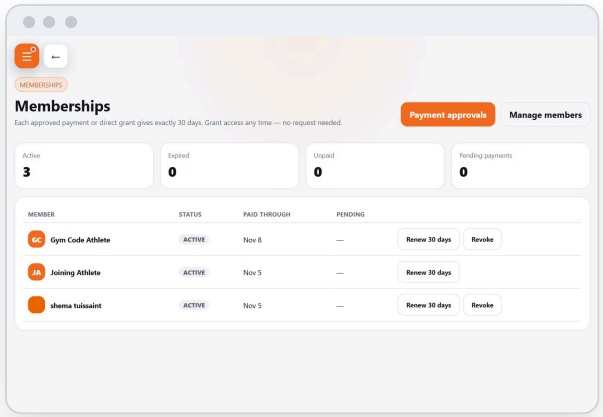

FLOW 08 · PART 2 OF 2

Join a gym, pay, get approved, get access

The money flow end to end: a member pays, the gym sees it as PENDING, confirms it, and 30 days of access start.

Athlete · Gym / Coach

5 Membership shows ACTIVE

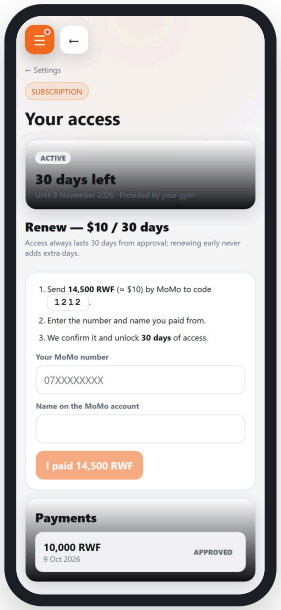

YOU DO Open Memberships.

KOTAANA Status, paid-through date and pending count per member. "Grant 30 days" gives access with no request at all.

SAVED reads subscriptions

6 Member sees access

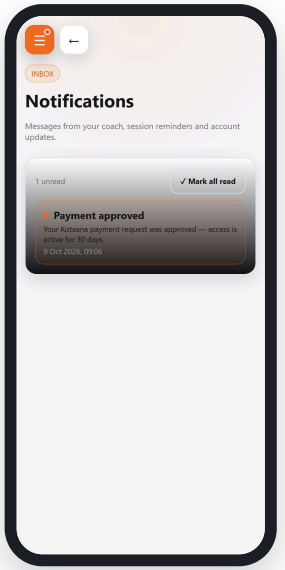

YOU DO Settings → Subscription.

KOTAANA "30 days left — Provided by your gym", plus payment history.

SAVED reads subscriptions, payment_requests

7 Confirmation message

YOU DO Open Notifications (red badge in the menu).

KOTAANA "Payment approved — access is active for 30 days."

SAVED notifications

RULES THAT CANNOT BE BROKEN

- Every approval or grant = exactly 30 days from that moment; never more.
- Renewing early resets the clock to 30 days — it does not stack.
- A gym can revoke only access it granted; admin can revoke any.

OTHER WAYS TO GET ACCESS

- Gym → Grant 30 days (settles a pending request too).
- Admin → Subscriptions → grant 1–30 days, or approve a direct $10 payment.
- Direct plan price: $10 per 30 days × the admin-set USD→RWF rate.

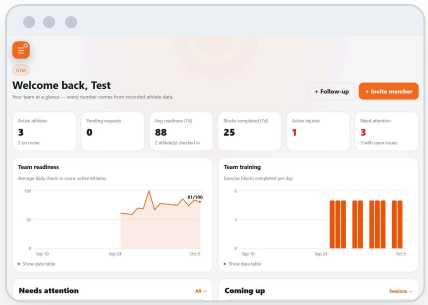

FLOW 09

Gym coaching loop

See who needs attention, open an athlete, act — and the athlete is told.

Gym / Coach Athlete

1 Dashboard

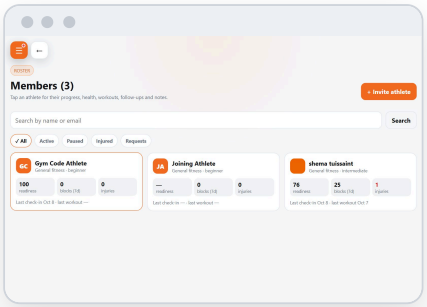

YOU DO Open the gym dashboard.

KOTAANA Counts of active athletes, pending requests, average readiness, blocks completed, injuries and who needs attention, plus team charts.

SAVED reads relations, check-ins, performances

2 Members

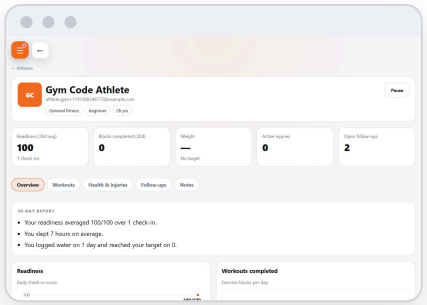

YOU DO Search or filter: active, paused, injured, requests.

KOTAANA Each card shows readiness, blocks done in 7 days, injuries and last activity.

SAVED reads athlete signals

3 Open an athlete

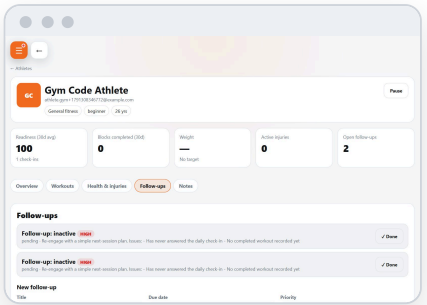

YOU DO Tap a member.

KOTAANA 30-day report, charts, goal, level, weight; tabs for Workouts, Health, Follow-ups, Notes.

SAVED reads profile + history

4 Act

YOU DO Create a follow-up, write a note, or log an injury.

KOTAANA Follow-up and shared notes notify the athlete; a logged injury also changes their future workouts.

SAVED follow_ups, coach_notes, injuries, notifications

WHAT THE ATHLETE SEES

- Notifications: “Coach follow-up: …”, “New note from your coach”, “Your coach recorded an injury”.
- Shared notes also appear under “Notes from your coach”.
- Private notes never leave the gym.

ACCESS CONTROL

- A gym can only open athletes on its own active or paused roster.
- Removing a member ends access to their data and notifies them.
- Gym staff never see medications or surgeries.

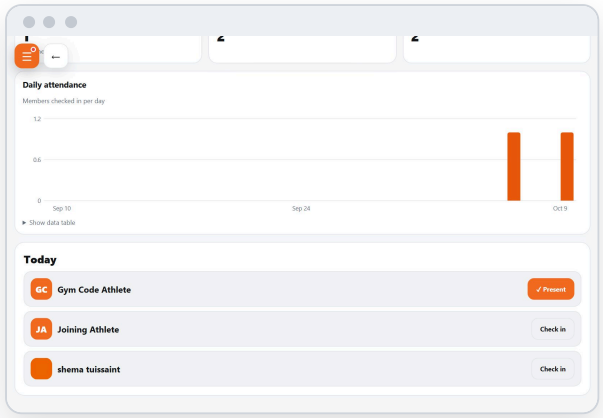

FLOW 10

Attendance, memberships and revenue

Run the gym day to day: who came, who has paid, what you earned.

Gym / Coach

1 Check members in

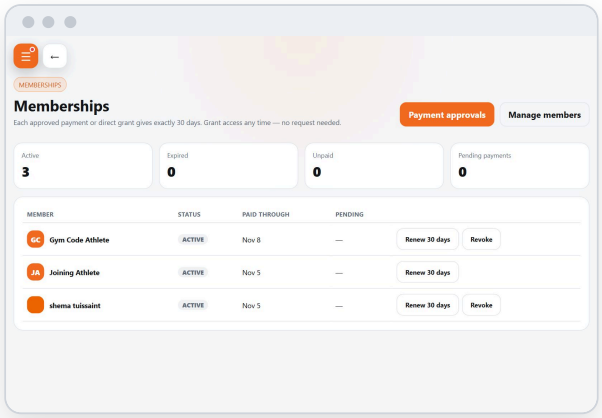

YOU DO Tap Check in next to a member as they arrive.

KOTAANA Records one check-in per member per day; totals for today, 7 and 30 days; daily chart.

SAVED attendance (unique gym + member + day)

2 Memberships

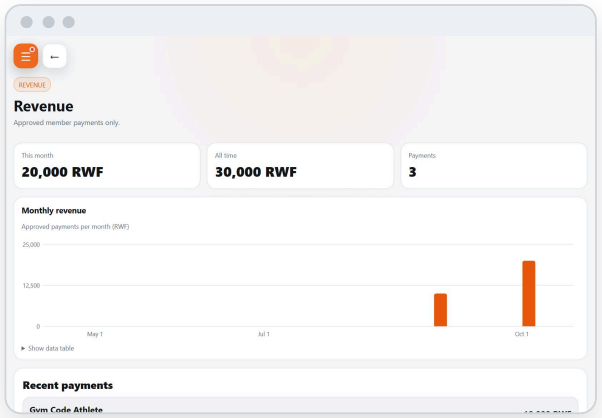

YOU DO Review Active / Expired / Unpaid; renew or grant access.

KOTAANA Status comes from each member's real access dates, not guesses.

SAVED reads subscriptions

3 Revenue

YOU DO Open Revenue.

KOTAANA This month, all time, a 6-month chart and the recent approved payments.

SAVED reads approved payment_requests

WHAT HAPPENS NEXT

- Expired members keep their data but lose active status after 30 days.
- Approving or granting again restarts the 30 days.
- CSV export of athletes is on Analytics.

NOT YET BUILT

- Revenue split between direct and coach-covered plans.
- Churn and retention reports.

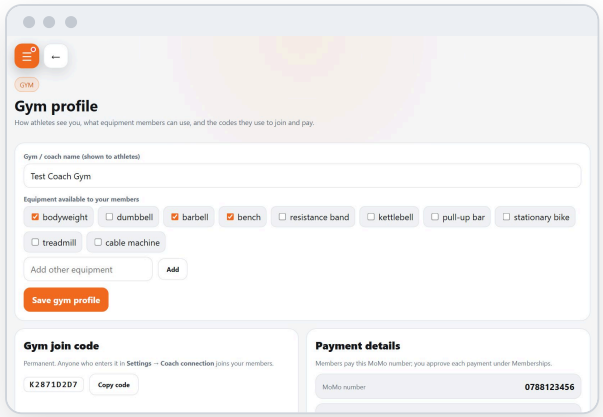

FLOW 11

Set up your gym

Name, equipment and the codes members use to join — your equipment automatically becomes theirs.

Gym / Coach · Athlete

1 Gym profile

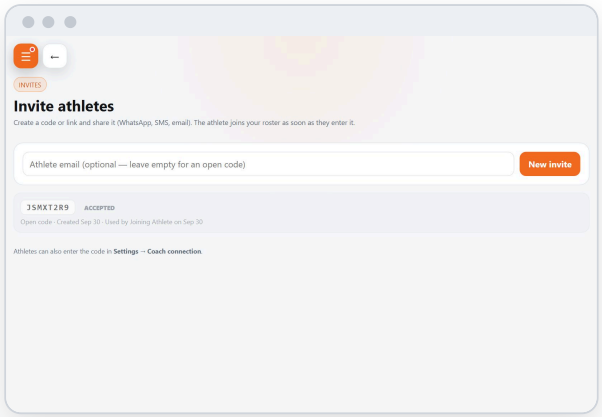

YOU DO Set the gym name, tick equipment, copy your permanent join code.

KOTAANA Connected members get your equipment added to their workout generation; the code lets anyone join instantly.

SAVED profiles (name, equipment, connectCode, MoMo)

2 Invites

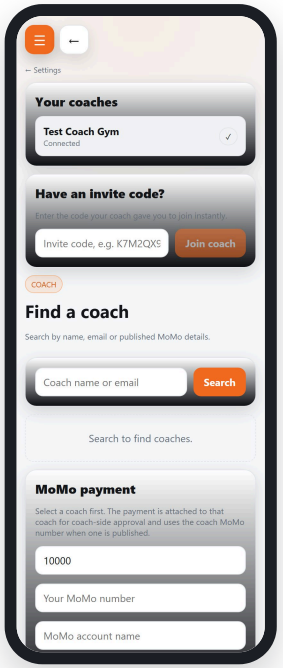

YOU DO Create a one-time code or link (optionally for one email).

KOTAANA Codes expire after 14 days. Using one connects the athlete and tells you.

SAVED coach_invites

3 Member joins

YOU DO Athlete enters the code in Settings → Coach connection.

KOTAANA Relation becomes active; the gym gets a “New member joined” notification.

SAVED coach_athlete_relations, notifications

WHAT HAPPENS NEXT

- The member's next workout can use barbells, benches, machines… your gym lists.
- The member appears in Members, Attendance and Memberships.
- Payments from that member route to your MoMo number.

ALSO AVAILABLE

- Email request: the athlete accepts it from Notifications.
- Pause a member to stop monitoring without deleting history.

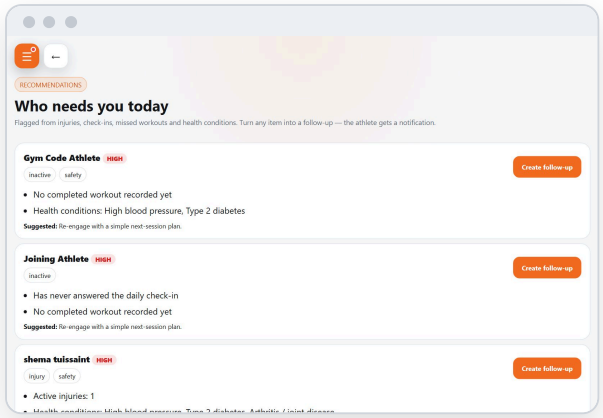

FLOW 12

Recommendations, sessions and analytics

Tools that turn recorded data into the gym's next actions.

Gym / Coach

1 Who needs you today

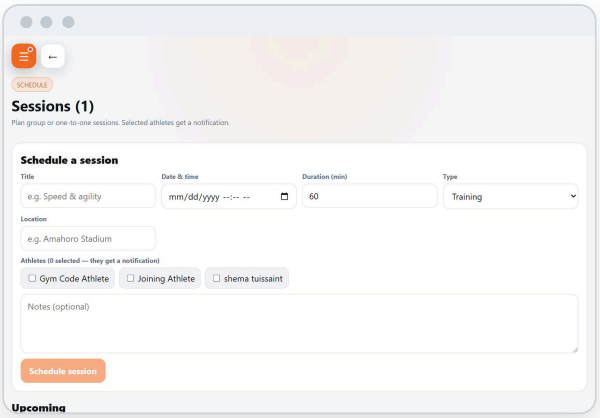

YOU DO Review the flagged athletes and press Create follow-up.

KOTAANA Flags active injuries, sick/off check-ins, low readiness, low completion, no check-in or workout for days, pregnancy and health conditions.

SAVED follow_ups (+ athlete notification)

2 Schedule a session

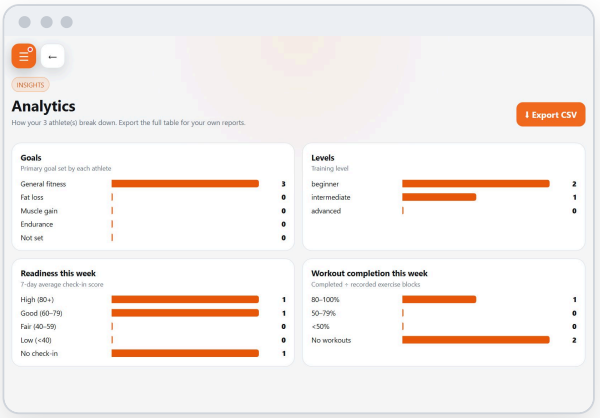

YOU DO Title, date and time, place, type, tick the athletes.

KOTAANA Selected active members are notified; cancelling notifies them again.

SAVED sessions (TrainingSession), notifications

3 Analytics + export

YOU DO See goal, level, readiness and completion breakdowns; Export CSV.

KOTAANA CSV cells starting with = + - @ are neutralised so spreadsheets cannot run athlete-typed text as formulas.

SAVED reads athlete signals

WHAT HAPPENS NEXT

- A follow-up marked Done leaves the queue.
- Sessions appear on the Dashboard under Coming up.
- Recommendations refresh every time the page opens.

PLANNED

- Messaging between gym and athlete.
- Per-athlete permission switches (Permissions page).

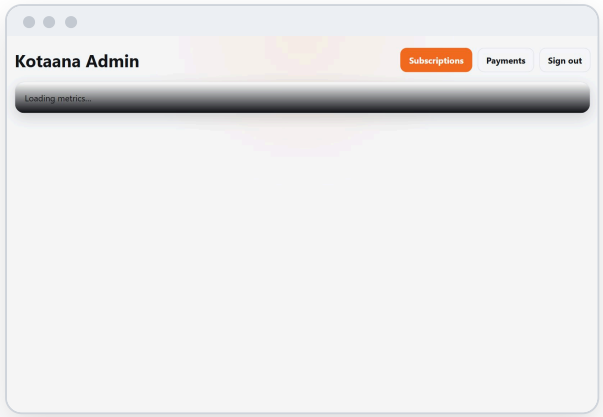

FLOW 13

Admin: price, access and payments

The admin has total control of subscriptions — but never beyond 30 days.

Admin

1 Admin home

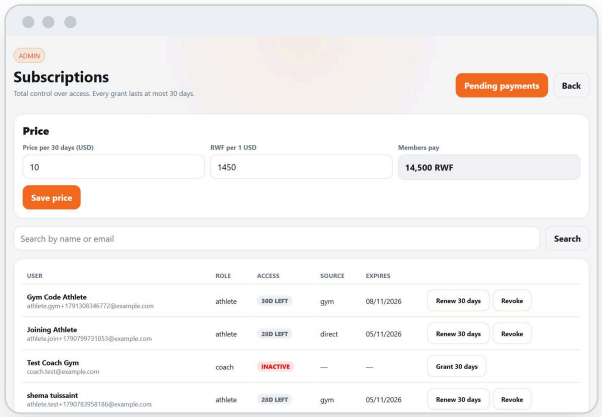

YOU DO Log in as admin.

KOTAANA Admin is reserved for the configured admin email — it can never be chosen at sign-up.

SAVED users.role = admin

2 Subscriptions

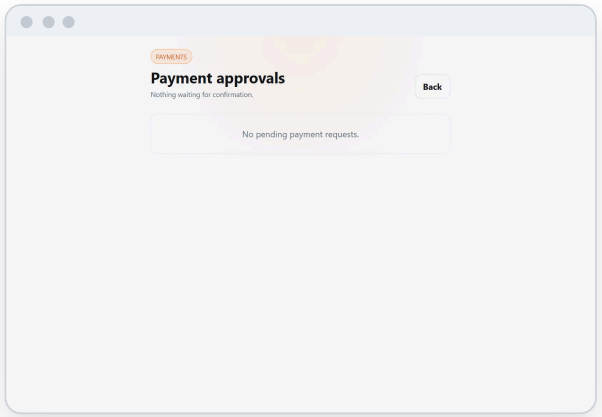

YOU DO Set the price (USD) and rate; search anyone; Grant 30 days / Renew / Revoke.

KOTAANA Price shown to members is USD × rate in RWF, set by the server. Grants are limited to 1–30 days.

SAVED app_config, subscriptions, notifications

3 Pending payments

YOU DO Approve or reject any pending payment.

KOTAANA Approval grants 30 days to the payer.

SAVED payment_requests, subscriptions

WHAT HAPPENS NEXT

- The user gets an “Access granted” or “Payment approved” notification.
- Expiry is automatic: after the date the account shows inactive.
- Price changes apply to new payments immediately.

BEFORE LAUNCH

- Set Kotaana's MoMo payment code (.env or app_config).
- Set ADMIN_BOOTSTRAP_PASSWORD and run the seed to create the admin login.
- Access is not yet enforced as a paywall — nothing blocks inactive users.

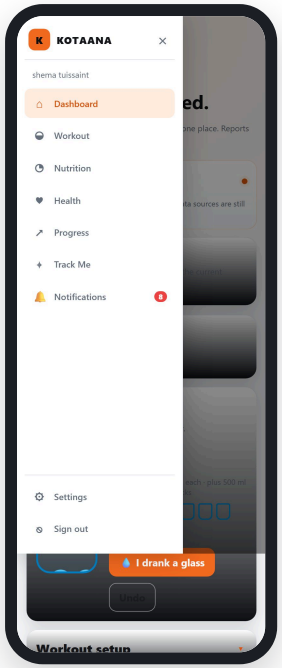

FLOW 14

Menu, back button and settings

Every page has ☰ and ← . The menu closes the moment you pick a link.

Athlete | Gym / Coach

1 Athlete menu

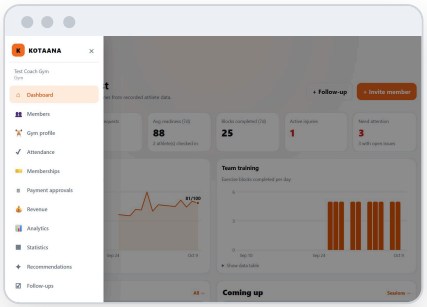

YOU DO Tap ☰.

KOTAANA Dashboard, Workout, Nutrition, Health, Progress, Track Me, Notifications (red count), Settings, Sign out.

SAVED —

2 Gym menu

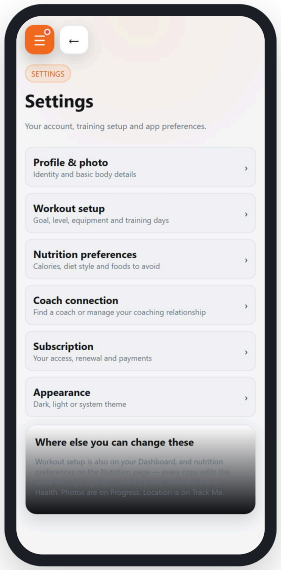

YOU DO Tap ☰ in the gym portal.

KOTAANA Dashboard, Members, Gym profile, Attendance, Memberships, Payment approvals, Revenue, Analytics and more.

SAVED —

3 Settings

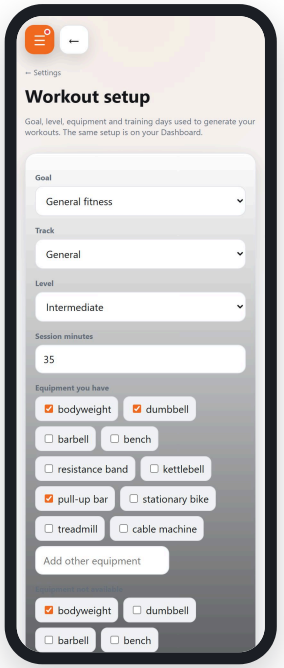

YOU DO Open Settings.

KOTAANA Profile & photo, Workout setup, Nutrition preferences, Coach connection, Subscription, Appearance (system / dark / light).

SAVED profiles

4 Workout setup

YOU DO Goal, track, level, minutes, equipment, training days.

KOTAANA Same form as on the Dashboard — edits the same profile fields.

SAVED profiles

GOOD TO KNOW

- ← goes back one step, or home if there is no history.
- Saved settings keep you signed in.
- Language: English now; French is planned.

PART B · RELATIONSHIPS

How the tables connect

Everything hangs off the User. A single user can be an athlete, a gym/coach or an admin; coaching links two users through CoachAthleteRelation.

One row per day. check-ins, water and plans are unique per user per date.

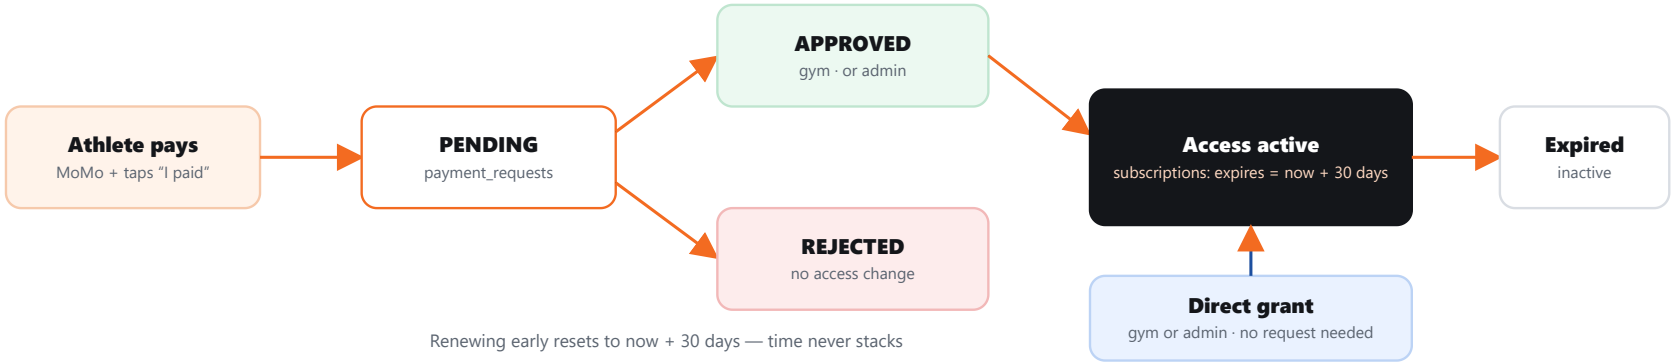

Cascade delete. Deleting a user removes all their rows (data deletion by design).

Unique keys. gym + member + day (attendance), coach + athlete (roster), user (subscription).

PART B · BUSINESS RULES

Payments and access rules

The only ways access starts — and the single rule that ends it.

Renewing early resets to now + 30 days — time never stacks

Payment states

STATE	MEANING	WHO CHANGES IT
pending	Payment recorded, money not yet confirmed	member creates
approved	Confirmed — 30 days granted	gym (own members) or admin
rejected	Not accepted — nothing changes	gym or admin

Who gets paid

PLAN TYPE	PAYS TO	APPROVED BY
coach_service	the gym's MoMo number	that gym (or admin)
direct	Kotaana's MoMo code	admin
coach_plan	Kotaana's MoMo code	admin

Direct and gym-plan prices come from the server: $10 × rate. Gym membership amounts are what the member sends.

PART B · NOTIFICATIONS & SETUP

Who is told what — and how to run it

EVENT	WHO IS TOLD	MESSAGE
Gym follow-up created	Athlete	Coach follow-up: <title>
Coach note shared	Athlete	New note from your coach
Injury logged by gym	Athlete	Your coach recorded an injury
Session scheduled / cancelled	Selected athletes	Session scheduled / cancelled: <title>
Gym sends connection request	Athlete	Coach connection request (Accept / Decline inside)
Athlete answers request	Gym	Athlete accepted / declined
Athlete joins by invite or gym code	Gym	Invite accepted / New member joined
Member removed	Athlete	Coach connection ended
Payment approved / rejected	Payer	Payment approved — access active for 30 days
Gym or admin grants access	Member	Access granted

Run it locally

`npm install`	install packages
`npx prisma db push`	create the tables
`npm run db:seed`	load exercises, foods, admin
`npm run dev`	start at localhost:3000
`npm run build`	production build (must pass for Vercel)

Required settings (.env / Vercel)

`DATABASE_URL` `DIRECT_URL`	PostgreSQL
`AUTH_SECRET` `AUTH_URL`	sessions; site address
`ADMIN_BOOTSTRAP_PASSWORD`	creates the admin login
`KOTAANA_PLATFORM_MOMO_CODE`	where direct payments go
`GOOGLE_CLIENT_ID/SECRET`	optional Google sign-in

HONEST STATUS

What is built — and what is next

This guide only describes features that exist and were tested. These items from the product plan are not built yet.

Built and working

- Sign-up, login, roles, admin protection
- Daily check-in → readiness
- Auto daily workout with safety rules, demos
- Nutrition, water tracker, location
- Health profile with 12 conditions
- Progress charts and written report
- Gym portal: members, follow-ups, injuries, sessions, attendance, memberships, revenue, analytics
- 30-day subscriptions, approvals, direct grants, admin pricing
- Notifications inbox

Not built yet

- French language
- Full onboarding questionnaire (equipment UNKNOWN state, goals list)
- Calorie target from age + weight + goal automatically
- Food photo analysis, meal logging
- Medication, doctor and cycle tracking pages
- Per-athlete permission switches (Permissions page)
- State versioning and AI summaries
- Gym revenue split, churn, scheduled background jobs
- Subscription paywall enforcement

Before going live

- Use a hosted PostgreSQL and set the environment variables
- Run `prisma db push` and the seed against it
- Set the MoMo code and admin password
- Configure Google OAuth redirect URL
- Change all test passwords
- Decide whether to enforce subscriptions
